Commentary

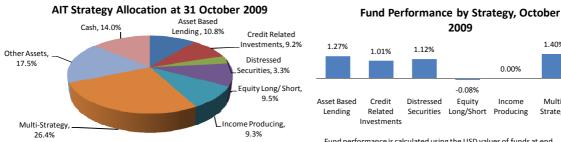

Ticker

For October 2009, AIT returned -1.07% in NTA terms. During the month, the AUD strengthened by 1.9% month-onmonth against the USD. As the majority of AIT's assets - together with the Swap debt - are USD denominated, this had a negative impact on AIT's NTA. Against this, AIT's underlying funds returned a positive 1% for the month on a value-weighted basis - using a fixed exhange rate.

Portfolio Updates

• In October, AIT received a redemption payment of USD 24m from one of its funds. This fund sits inside the Macquarie Swap and the proceeds will be used to pay down debt next month. (Further details in Debt Repayment, below.)

AIT Asset Allocation and Fund Performance for the Month by Strategy

^{* &#}x27;Other Assets' includes collateral, and cash held within the secondary Swap that cannot be utilised for debt repayment or distribution until Swap expiry (Dec2010).

Fund performance is calculated using the USD values of funds at end September and end October. For AUD denominated funds a fixed exchange rate is used.

Income

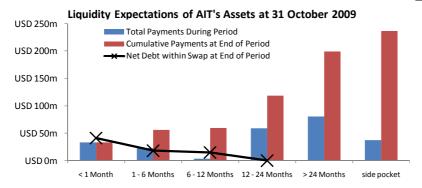

Producing

The portfolio of AIT consists largely of exposure to a basket of absolute return funds via a Swap facility with Macquarie Bank Ltd, together with a single investment in a fund held outside the Swap. Under the terms of the realisation of the AIT assets, the leverage from the Swap facility must be paid down before unitholders may receive distributions from assets sold or redeemed (that are within the Swap). During October AIT's leverage facility was reduced from USD 89.9m to USD 66.9m using redemption proceeds.

- The graph to the right illustrates the level of AIT's debt on a monthly basis from the end of December 2008 to the end of October 2009. Debt has reduced from USD 290.6m to USD 66.9m from its peak at the end of January to the end of October - a reduction of 77%.
- The below graph shows an increase in the < 1 Month category of USD 24m. As the date had not previously been fully confirmed, past factsheets had shown this in a later category.

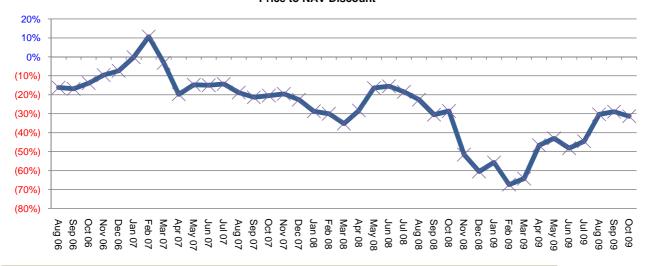

Expected Liquidity Profile of Gross Assets of AIT

This graph (see the April NTA factsheet for a full description) shows the payments that AIT expects to receive from its underlying investments as well as the anticipated reduction in AIT's Net Debt within the Swap. This latter figure excludes proceeds received from EBI Income Fund which sits outside the Swap.

¹ Unaudited – In calculating the NTA, AIT asset values have been calculated using unaudited absolute return fund performance estimates for the month being reported. For the purposes of calculating the above figures, the Australian Equivalents to International Financial Reporting Standards (AEIFRS) have been applied (other than for classification of net assets attributable to unitholders of AIT where Australian Generally Accepted Accounting Principles (AGAAP), as applied before the introduction of AEIFRS, have been used). The May 2007 monthly NTA performance was impacted by the AIT (previously EBI) rights issue and placement which were completed that month and does not include the implied value of EBB shares received by investors who successfully participated in the EBI capital raising. The performance of the underlying investment portfolio (excluding the effect of the capital raising) for May 2007 was +2.40%.
